

For **30 years** now **Antitheft Car Alarms Pty Ltd** has designed, developed and manufactured security products for the automotive industry.

With the advantage of being a **'Genuine Australian Manufacturer'** Antitheft has been able to develop a high quality product range (*designed to Australian Standards*) suitable for the ever changing requirements of the market and to back this up with readily available technical support, service and spare parts.

- **Immobilisation** – When the security system is set (automatic if passive) the engine cannot be started and multiple immobilisation points with black wiring harness make it virtually impossible to overcome.
- **Piezo Shock Sensor** – Detects any severe shock to the vehicle's body, glass, wheels fitted with lock nuts, or if an attempt is made to tow the vehicle. It can be programmed to initially only Warn-Off the intended intruder.
- **Ultrasonic or Microwave Movement Sensor** – Provides an invisible field to protect the inside of the vehicle and can be temporarily excluded by the remote key if required.
- **Tilt Sensor** – Monitors and detects any change in the angle of the vehicle.
- **Visual Alarm Feature** – When the alarm is triggered the indicators and dome light will flash alternately.
- **Backup Battery Siren** – A secondary battery built into the siren housing powers the siren should the vehicle's battery be disconnected.
- **8 Sector Automatic Diagnostic System** – Monitors the vehicle at all times giving warnings and/or reports if required.
- **Panic Feature** – Provides a personal alarm for use while in range of vehicle.
- **Anti Hijack** – Locks the vehicle's doors when vehicle is being driven i.e. to stop someone jumping in at the traffic lights.
- **2 Stage Unlocking** – Only unlocks the driver's door on the first press of the remote key.
- **Dome Light Activation** – Activates the interior dome light on deactivation of the security system.
- **Perimeter Lighting** – Activates the indicators for 30 seconds to provide security lighting on activation and deactivation of the security system.
- **Auto Rearm & Lock** – Reactivates the security system and locks the doors if the system is accidentally deactivated.
- **Total Closure** – Can be used to operate the central locking, close/open power windows and/or sunroof and operate electronic boot release functions from the remote keys.
- **Turbo Timer Interface/Function** – Allows the interfacing of the alarm to vehicles with Turbo Timers and can also act as a Turbo Timer.
- **CANBUS Interface** – Allows simple and unobtrusive integration of alarm to vehicles sophisticated electrical system.
- **Vehicle Tracking** – Allows the interfacing of the alarm to Vehicle Tracking Devices.
